

Banking & Finance Sprinkler Fire Protection

The Challenge

Tyco Fire & Integrated Solutions are the preferred choice for installing Life Safety Fire Protection systems throughout the Banking & Finance Industry. The key to our success has been our ability to provide a detailed risk assessment of a building and eliminate that risk through the provision of solid fire engineering solutions.

Working closely in conjunction with the other appointed trade contractors, we ensure that all aspects of installation and project management relating to each other's disciplines have been completed on time and on budget.

The majority of the Tyco Fire & Integrated Solutions the sprinkler systems installed for the Banking & Finance Industry have been what is termed as a "Shell and Core," "Life Safety" or "Fit-out" packages under extremely demanding installation programmes.

Many of these projects have involved installing sprinkler pumps and tanks and a sprinkler distribution pipework infrastructure to enable a sprinkler system "fit-out" to be completed on each floor as and when required.

These "fit-outs" are designed to meet the specific risk requirements of the building tenants as and when they occupy the office space.

a vital part of your world

Where these sprinkler projects have involved high rise buildings over 60metres in height, we have also installed "wet riser" hydrant systems to comply with local Fire Authority stipulations due to the pumping restrictions on fire fighting vehicles involved in high rise fires.

These "wet riser" hydrant systems enable the Fire Brigade to connect their fire hoses direct to the hydrant main and fight any potential large fire immediately and independently without the need for the involvement of their fire fighting vehicles.

Recent Projects:

- Barclays Bank
- Citibank
- Dresdner Kleinwort Wasserstein Bank of Germany
- HSBC
- Lloyds TSB
- The London Stock Exchange
